# Alpha Spectroscopy

Emily Adams [16ela1@queensu.ca](mailto:16ela1@queensu.ca)

# Agenda

- Position corrections for AP (alpha focus)
- Piezo, band selection resolution
- Alpha pair tagging
- Alpha pair tracking
- Gaussian fits for thorium decay chain analysis

# AP plot generated from current recon file

Piezo energy distribution  
corrected using neutron  
recoil data

Linear AP scale

Features

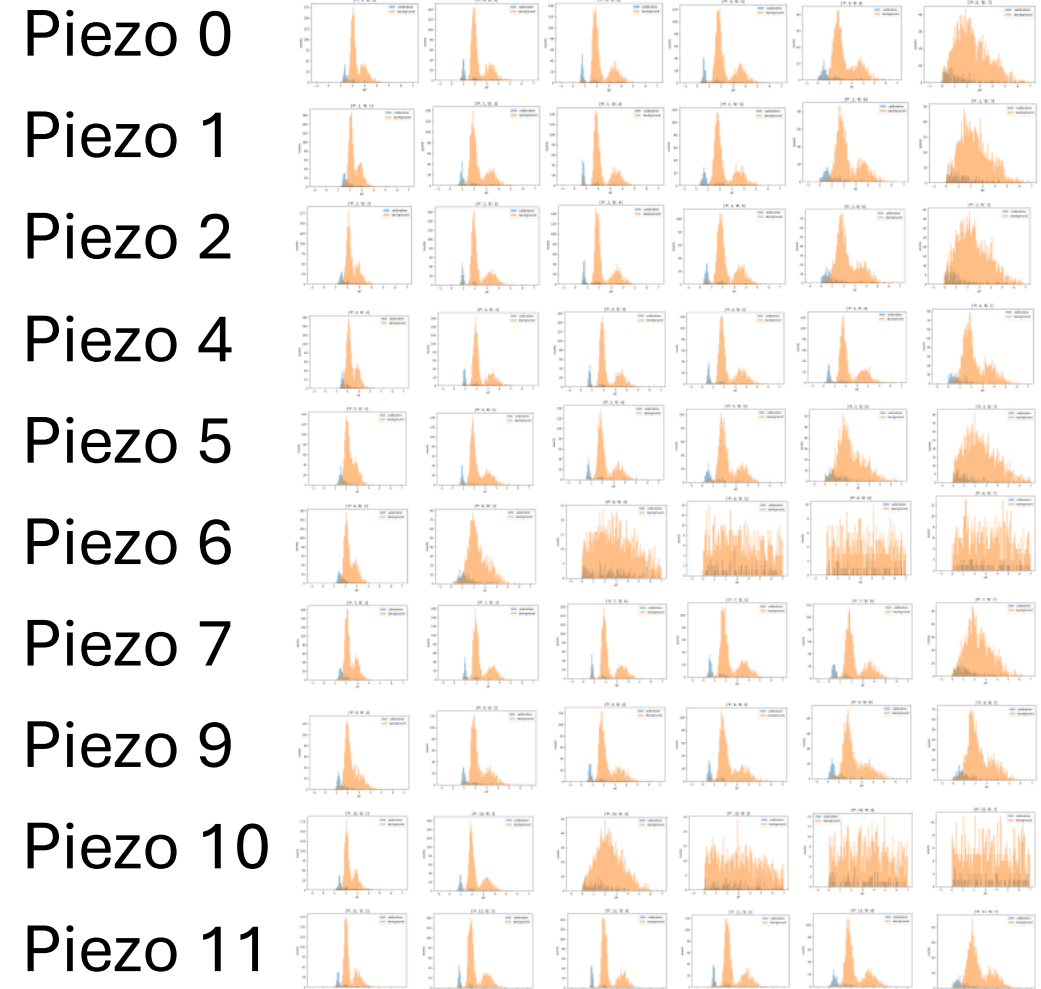

- Nice ROI resolution
- No alpha peak separation

# Alpha position corrections: $R^2$ $\phi$ $Z$ $P$

- Plot a histogram of corrected energy for each piezo, each band

- Plot a histogram of corrected energy for each piezo, each band
- Some bands cleaner than others

# Selecting p, b by eye

Piezo	Bands used
0	3, 4, 5
1	3, 4, 5
2	3, 4, 5
4	3, 4, 5, 6
5	4
6	-
7	3, 4, 5, 6
9	-
10	-
11	3, 4, 5, 6

Piezo 0

Piezo 1

Piezo 2

Piezo 4

Piezo 5

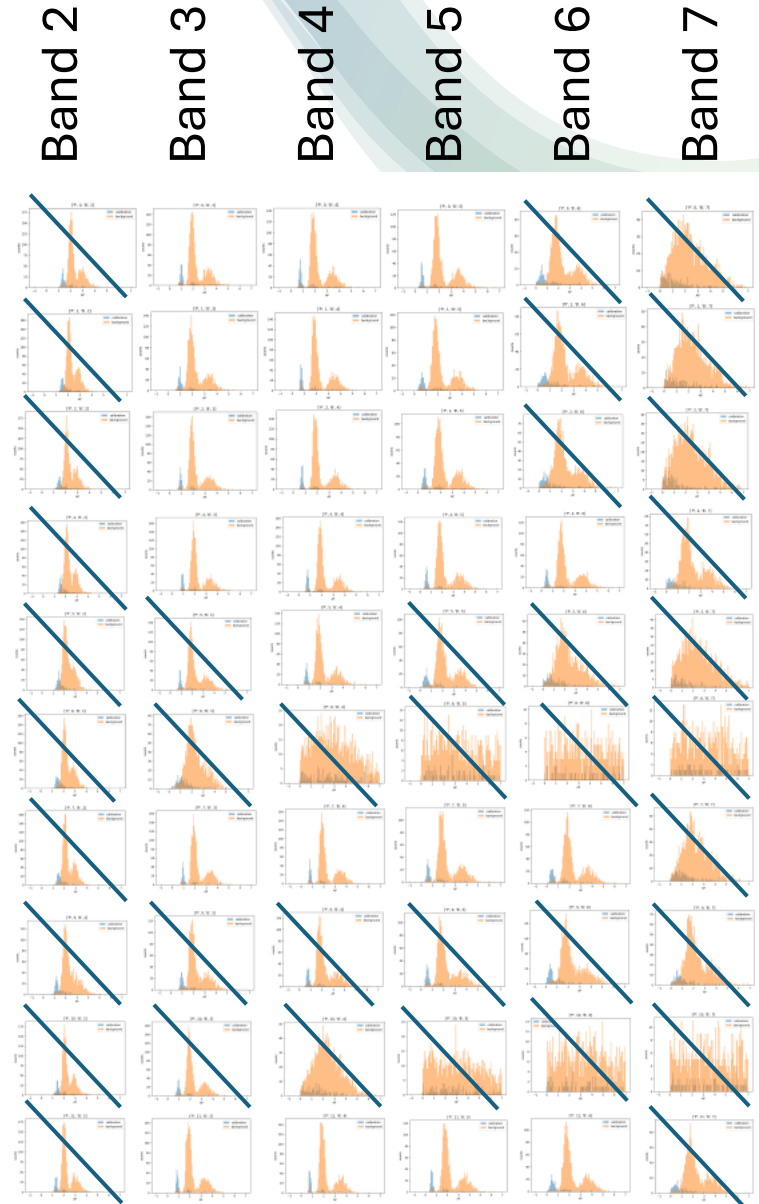

Piezo 6

Piezo 7

Piezo 9

Piezo 10

Piezo 11

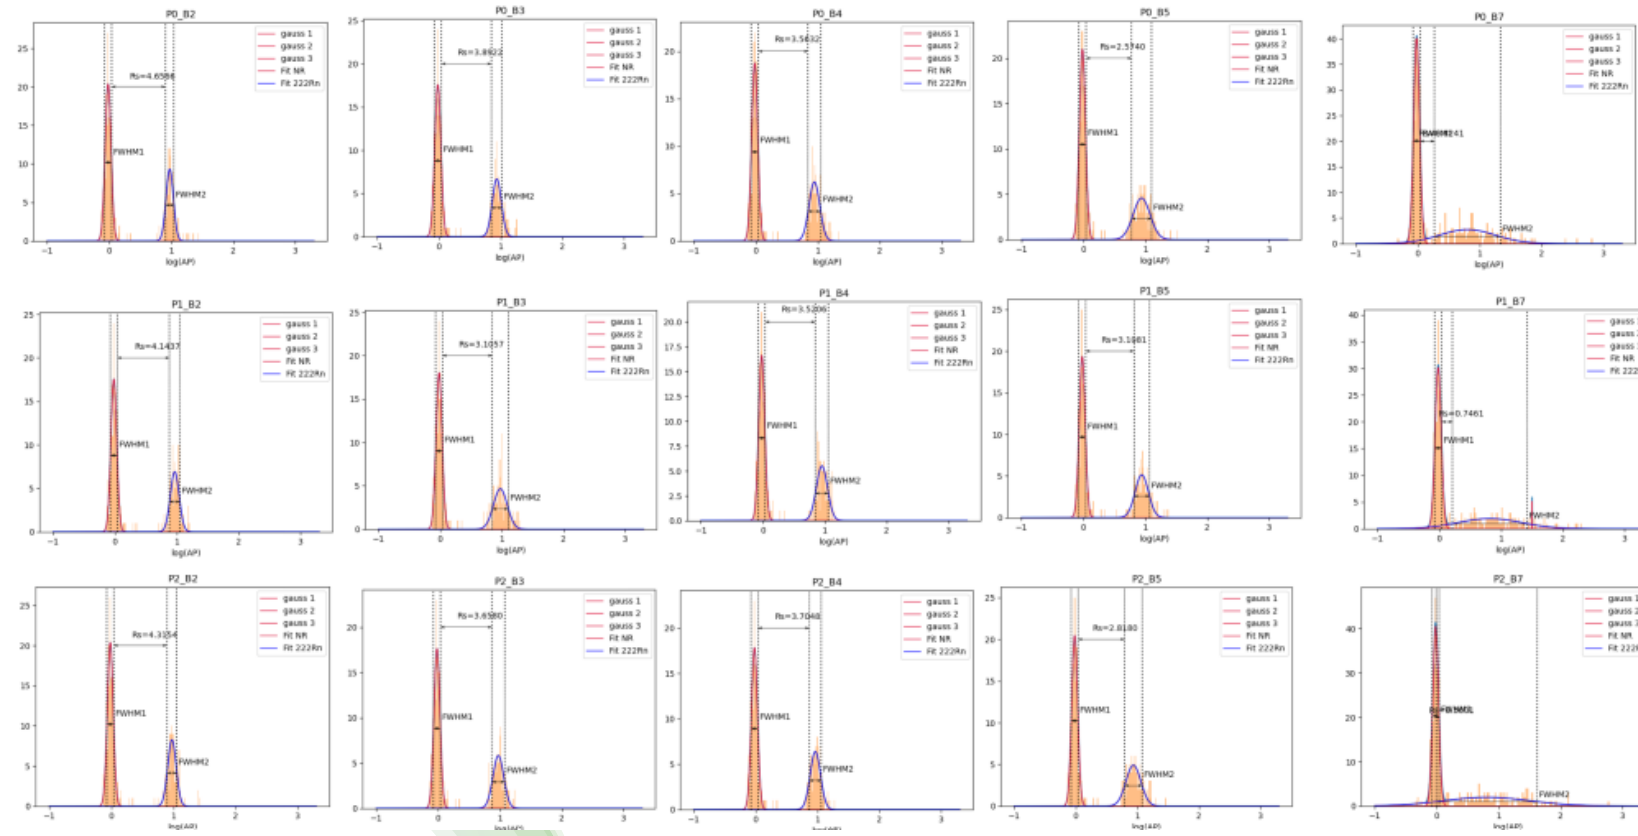

# Selecting p, b with resolution metric

$$R_s = 1.18 * \left( \frac{(\mu_2 - \mu_1)}{(FWHM2 + FWHM1)} \right)$$

# Select best resolutions for AP mean

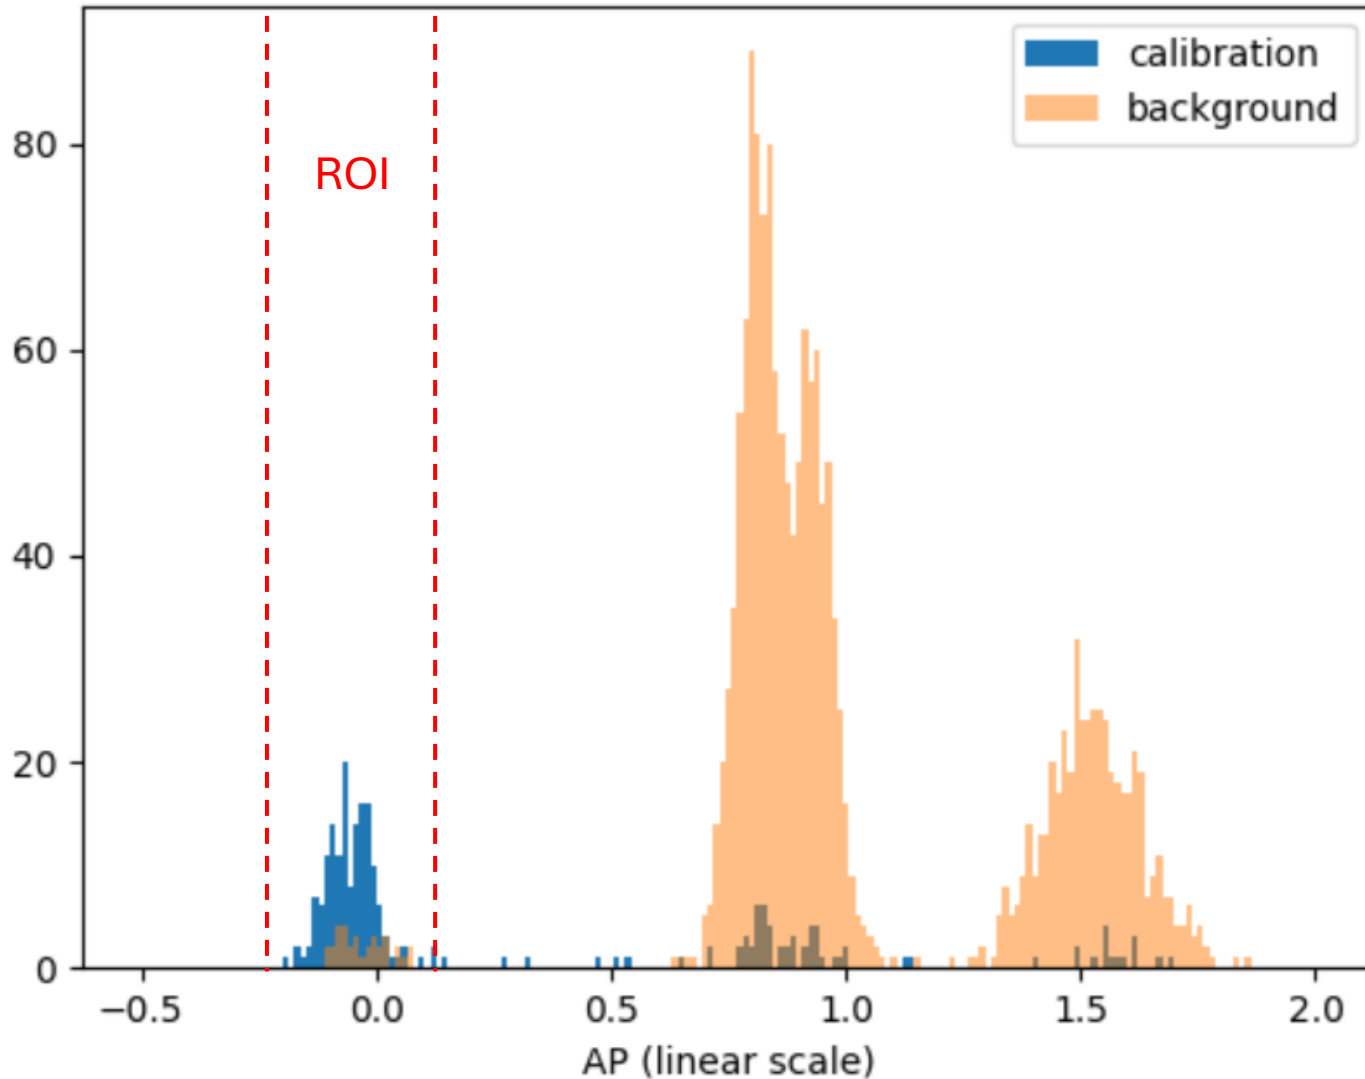

↪ Histogram of each resolution per piezo, per band

# Log(AP) plot

alpha position correction AP

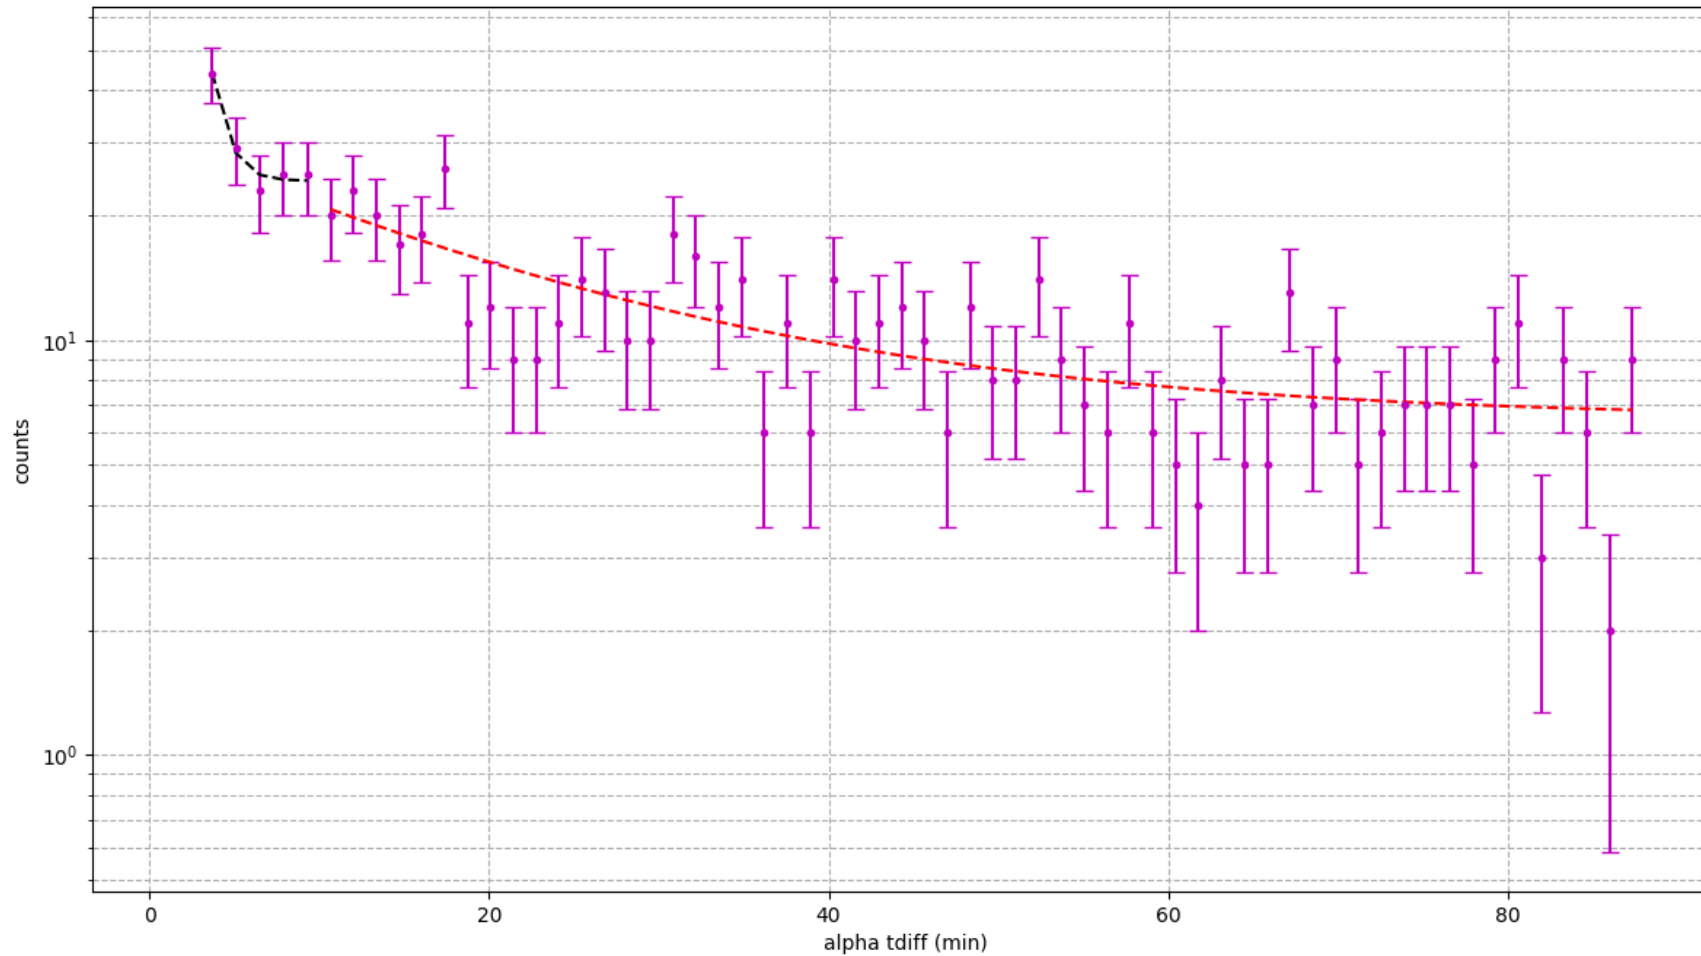

- Position corrections with alpha data
- Less resolution in ROI
- Improved resolution in alpha regime

# Alpha timing

$^{222}\text{Rn}$   
 $^{218}\text{Po}$

$^{222}\text{Rn}$ ,  $^{218}\text{Po}$ ,  $^{214}\text{Po}$

Data

$$t_2 - t_1$$

Fit

$$y = a * \exp(b(-x) - d) + c$$

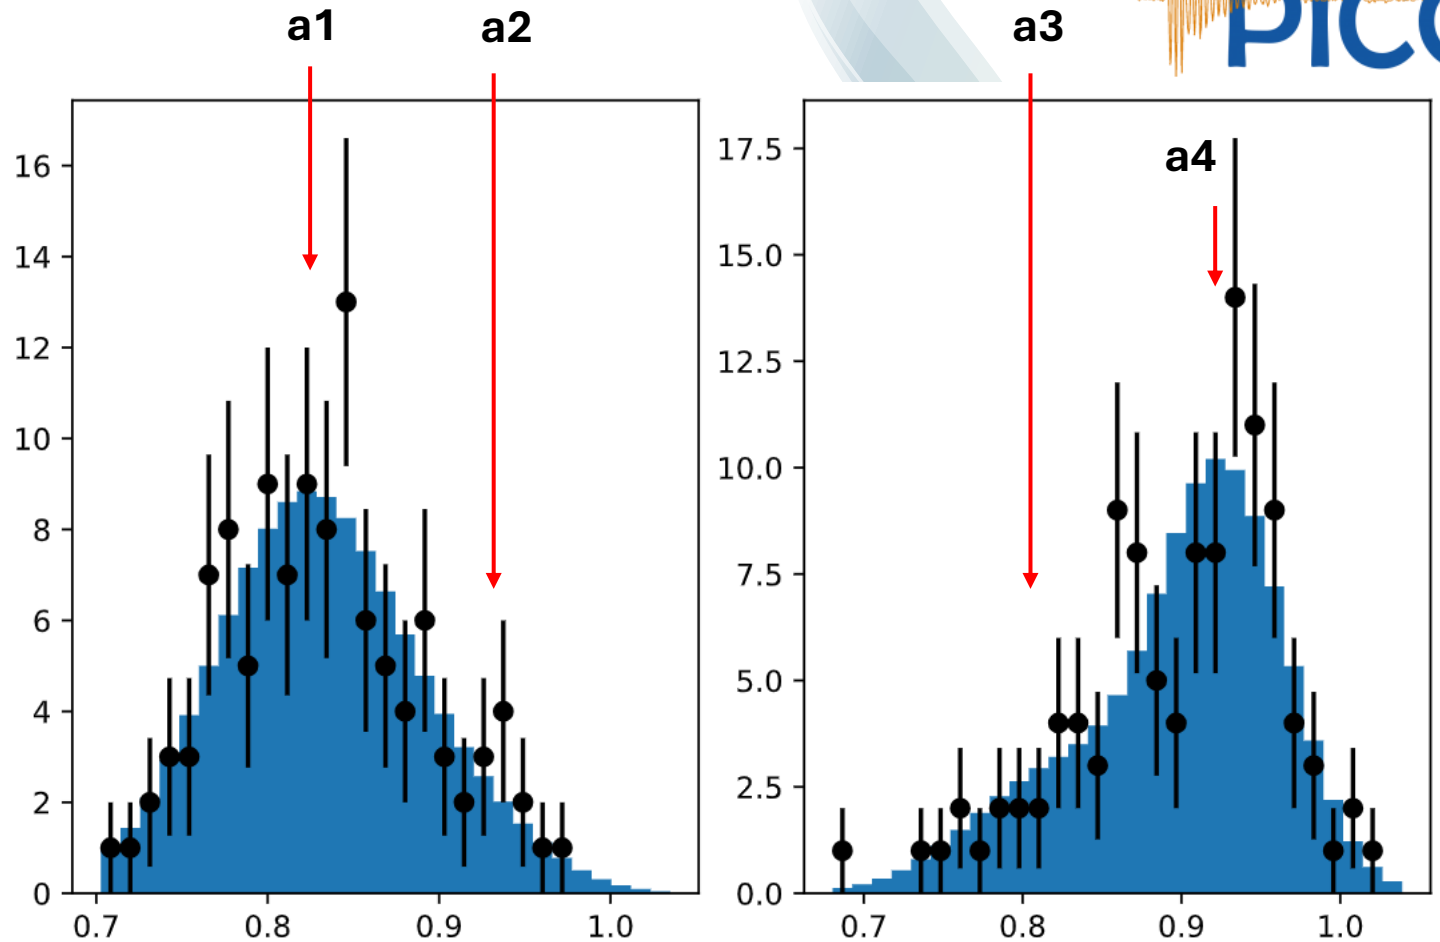

# Pair separation

- Identify pairs of alpha events with time separation of 10 min or less
- Constraint that the events are consecutive

# Peak purity

	Name	Value	Hesse	Error
0	a1	105	>	14
1	a2	9	<	10
2	mu1	0.824		0.010
3	sig1	0.055		0.007
4	mu2	0.927		0.008
5	sig2	0.040		0.006
6	a3	32	>	11
7	a4	78	>	13

- No  $^{218}\text{Po}$  present in  $^{222}\text{Rn}$  peak (counts=0 within error)
- Some leakage of  $^{222}\text{Rn}$  into the  $^{218}\text{Po}$  peak

# Sum under peaks

	Name	Value	Hesse Err	Minos Err-	Minos Err+
0	a1	105	14	-13	16
1	a2	9	10	-11	10
2	mu1	0.824	0.010	-0.009	0.011
3	sig1	0.055	0.007	-0.007	0.008
4	mu2	0.927	0.008	-0.008	0.008
5	sig2	0.040	0.006	-0.006	0.006
6	a3	32	11	-10	12
7	a4	78	13	-13	13

222Rn:

$$\mu - 3\sigma = 0.82379 - 3(0.055) =$$

$$\mu + 3\sigma = 0.82379 + 3(0.055) =$$

218Po:

$$\mu - 3\sigma = 0.92694 - 3(0.040) =$$

$$\mu + 3\sigma = 0.92694 + 3(0.040) =$$

$$\int_{\mu-3\sigma}^{\mu+3\sigma} \left( \frac{[A + err]}{\sigma\sqrt{2\pi}} \right) \exp\left( -\left( \frac{1}{2} \frac{(x - \mu)^2}{\sigma^2} \right) \right) dx$$

222Rn	222Rn in peak 2	218Po	218Po in peak 1

# 2d histogram: $\Delta s$ vs $\Delta t$

Xenon1T

Excess  $\Delta s < 20\text{cm}$   
 $0\text{s} < \Delta t < 40\text{s}$

PICO-40L

# KS test: are the distributions the same?

→ Yes

- Random pairs

- Alpha peak1, peak 2 pairs

# Pair tracking, binomial probability

	Z	R2	X	Y	$\phi$
n	104	104	104	104	104
k	78	53	48	46	50
p	0.5	0.5	0.5	0.5	0.5
P(at least k)	<b>0.0000164%</b>	<b>46.1%</b>	<b>81.1%</b>	<b>89.9%</b>	<b>68.8%</b>

- First alpha
- Second alpha

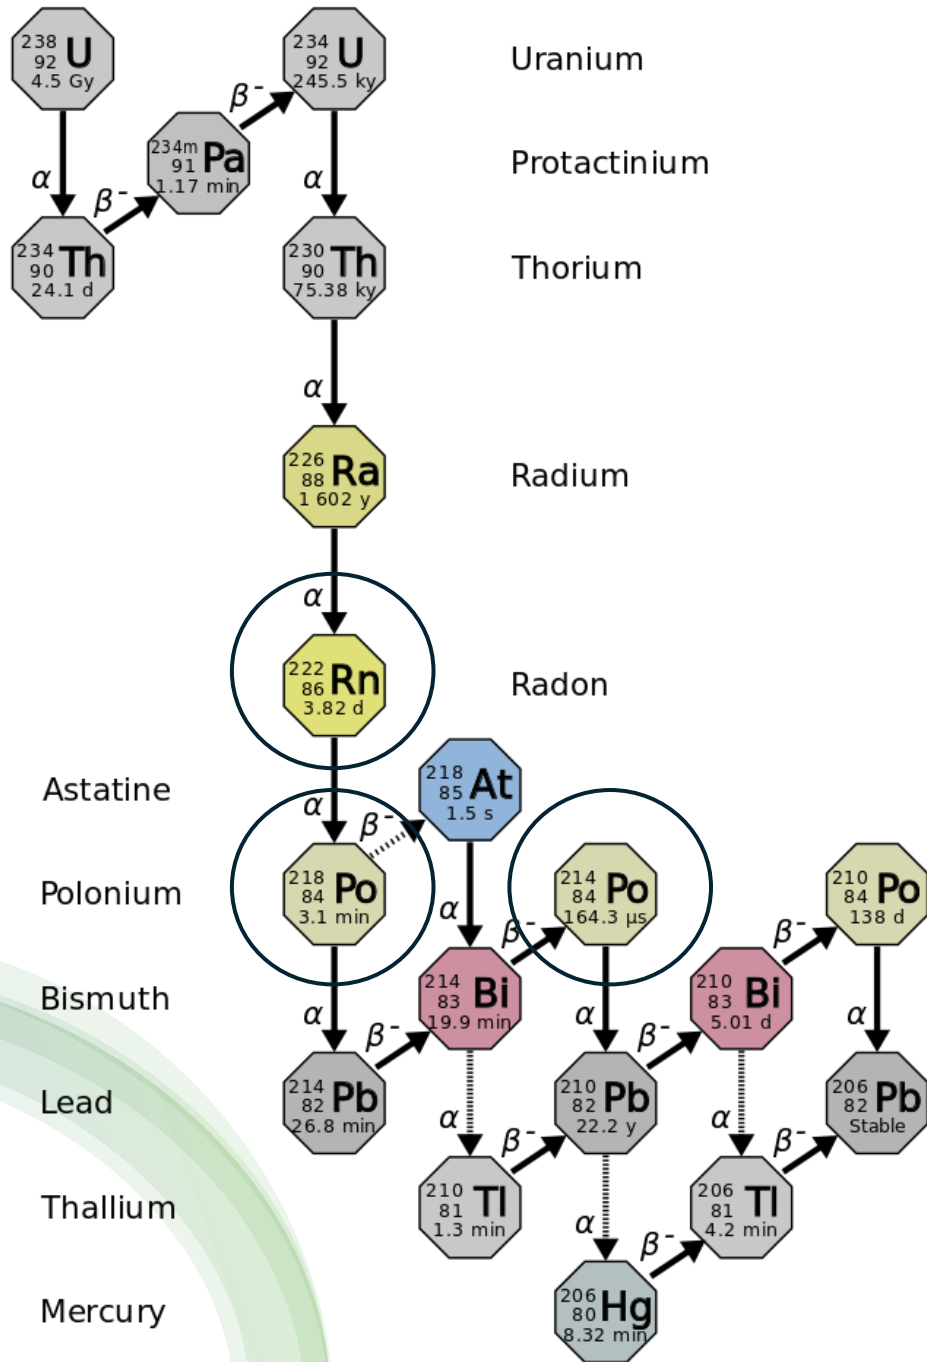

# 3 gaussian fit

- Uranium decay chain

Error bars =  $\sqrt{N}$

222Rn	218Po	214Po
8.664 ± 0.173	4.220 (± 0.149)	5.516 (±0.036)

Astatine  
 Polonium  
 Bismuth  
 Lead  
 Thallium  
 Mercury

# Sigma vs Alpha energy for U chain

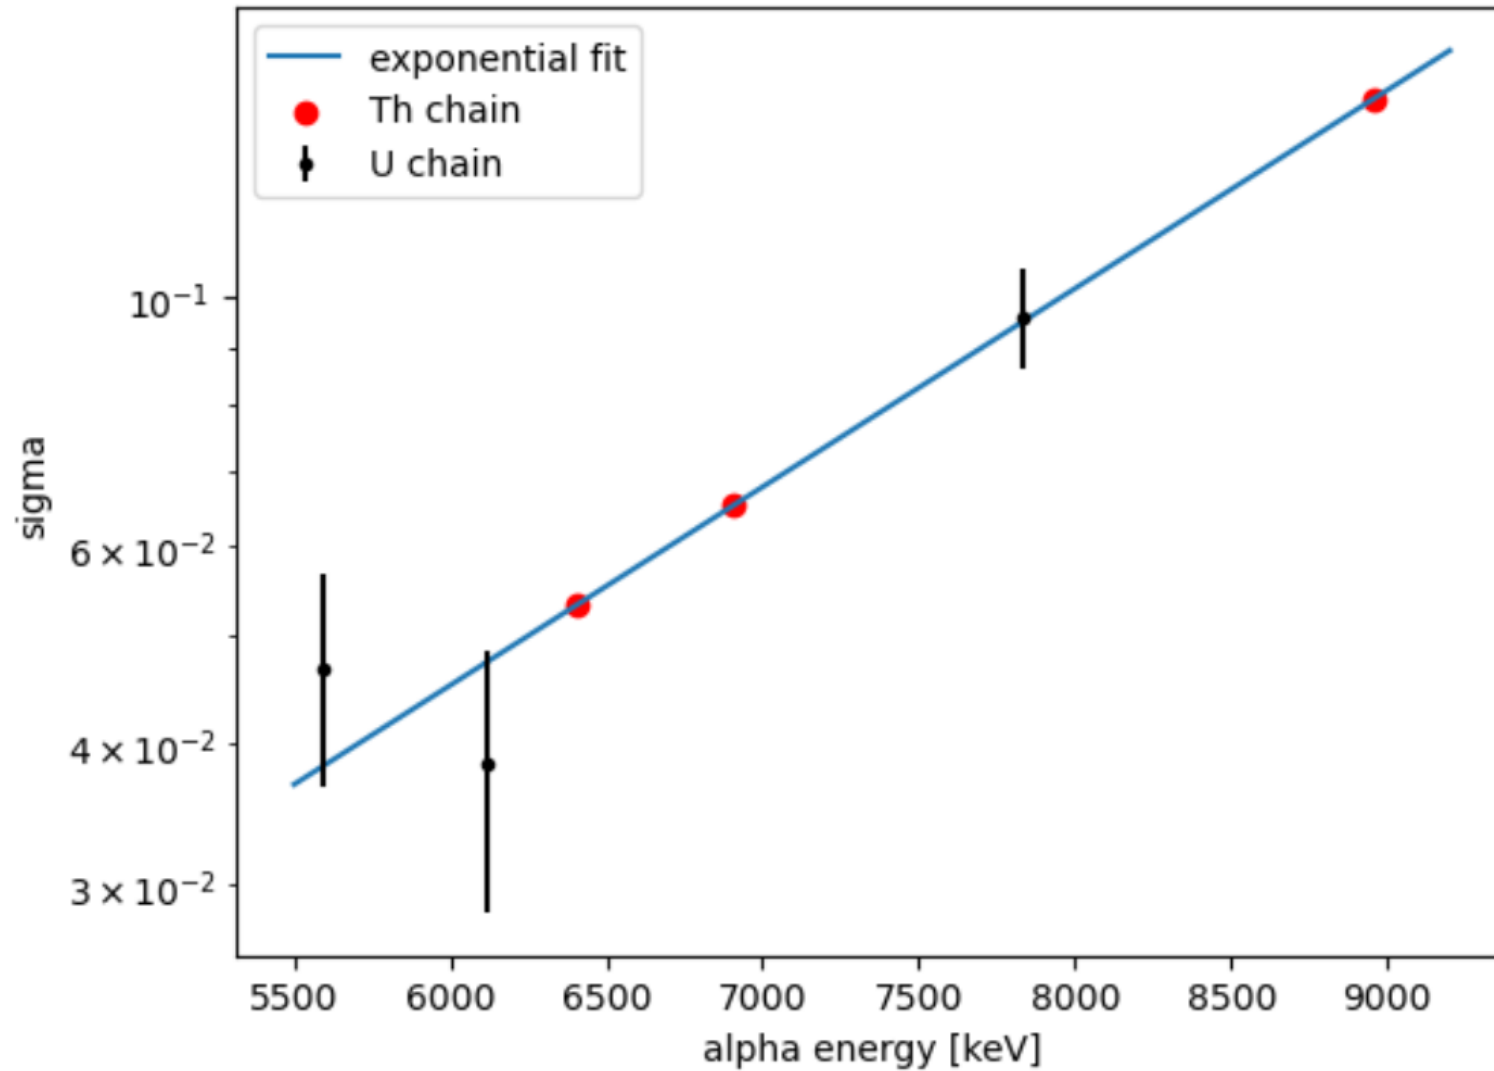

$\chi^2/ndof = 1.6$

$\chi^2/ndof = 1.525$

# Propagate to approximate Th chain sigmas

# Same process to find Th chain mean AP

$\chi^2/ndof = 0.5$

$\chi^2/ndof = 0.4$

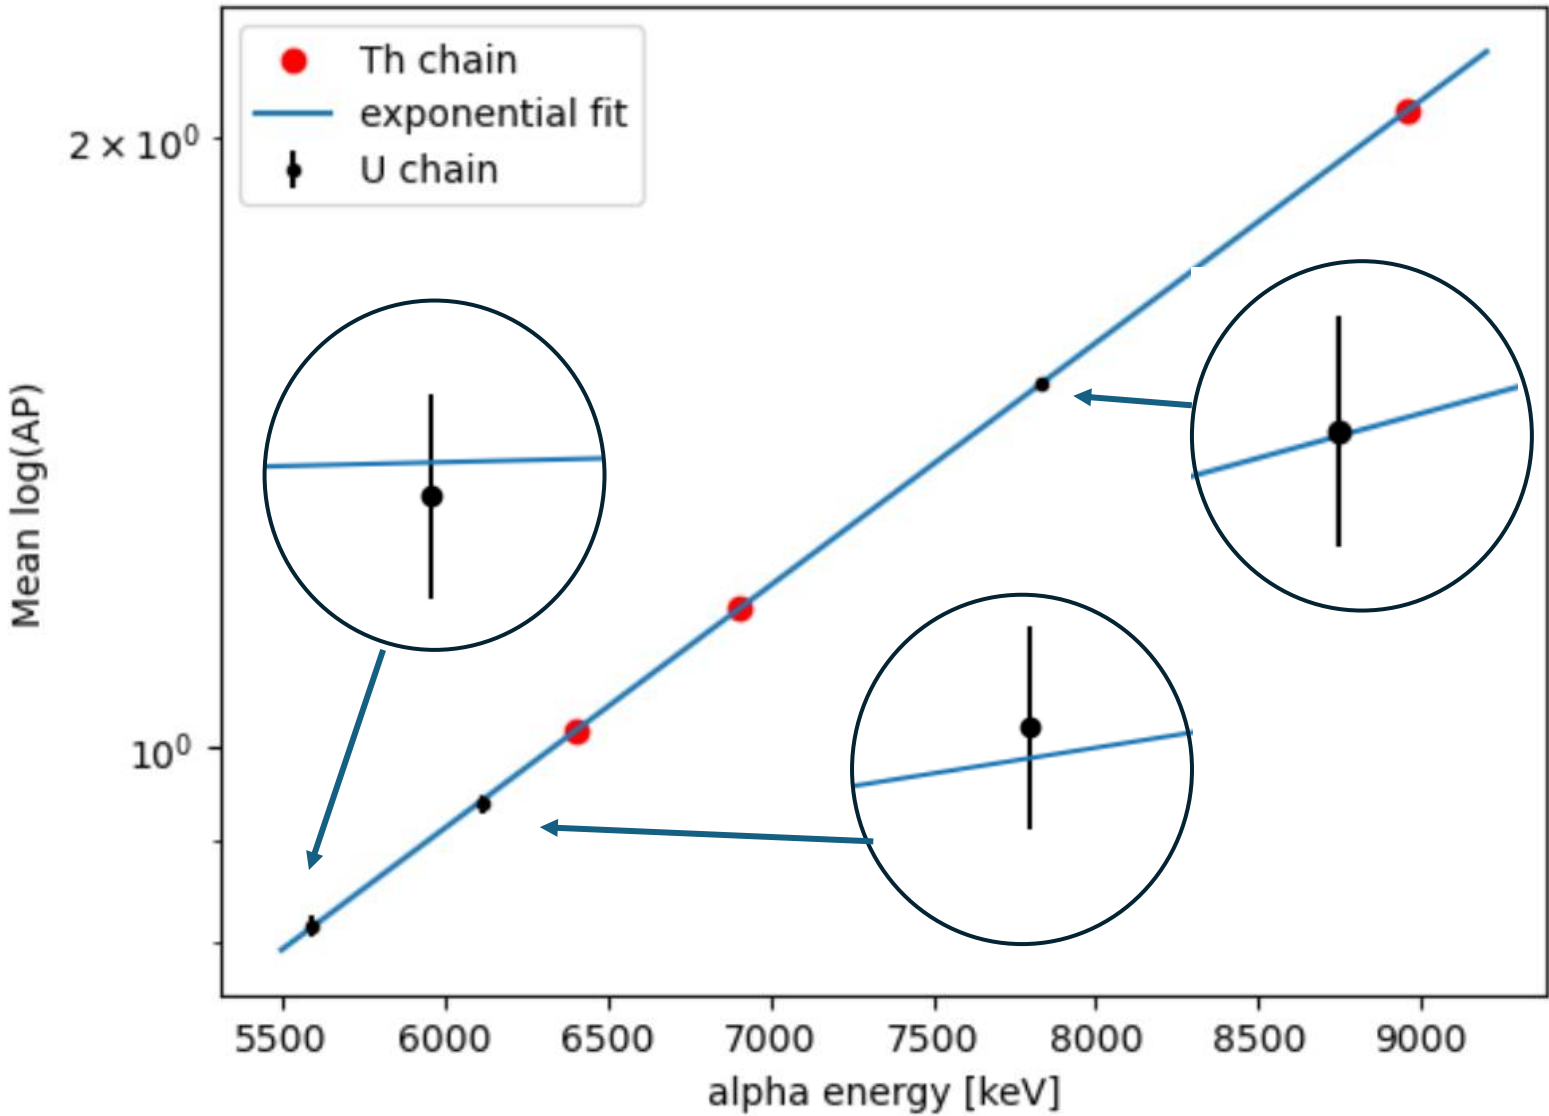

Alpha energy [keV]

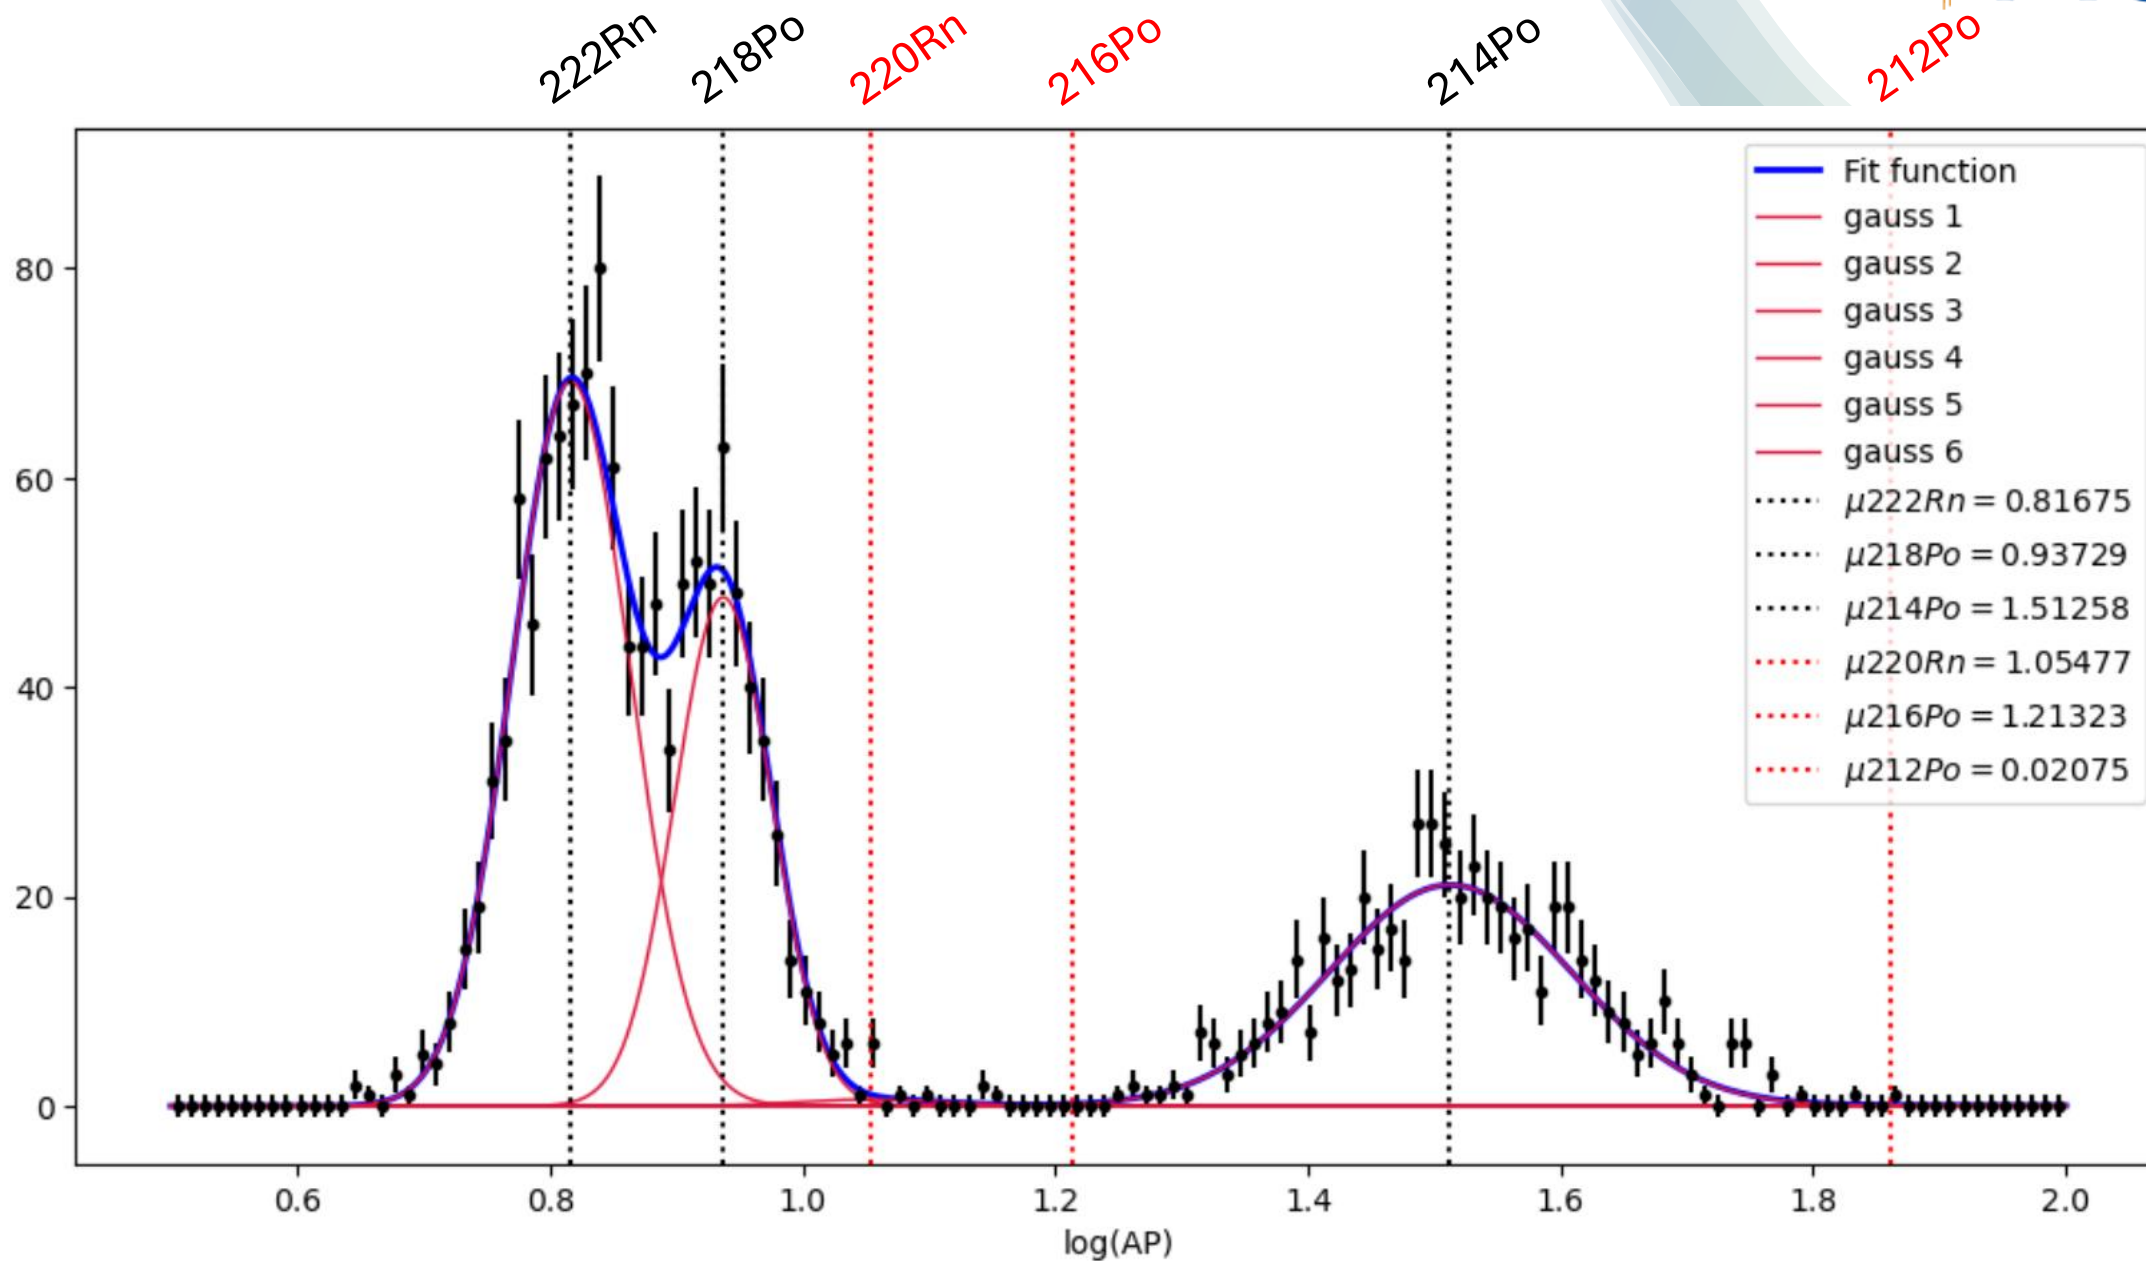

# Propagate this line to get mean AP for Th chain

# Error agrees with exponential fit

# 6 gaussian fit

# 6 gaussian fit amplitudes

**Error not included**  
(want to be sure before concluding we are free of thorium)

222Rn	218Po	220Rn	216Po	214Po	212Po
8.103	4.632	0.106	0.022	5.089	0.029

Thank You!
